1 Introduction

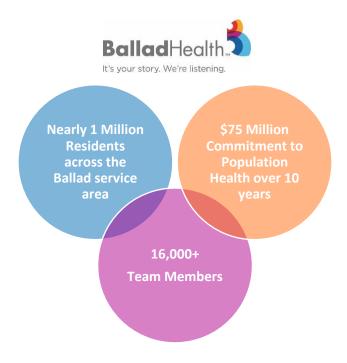

Smyth County Community Hospital, located in Marion, Virginia is one of the hospitals within the Ballad Health system. Ballad Health is an integrated healthcare system serving 29 counties of Northeast Tennessee, Southwest Virginia, Northwest North Carolina and Southeast Kentucky. Ballad was created upon the merger of two large regional health systems, Mountain States Health Alliance and Wellmont Health System, on February 1, 2018. Through rigorous state oversight, these two competitors have been granted the ability to merge into an integrated healthcare delivery system with a simple and concise mission: to improve the health of the people we serve.

Ballad Health operates a family of 21 hospitals, including three tertiary care facilities, a dedicated children's hospital, community hospitals, three critical access hospitals, a behavioral health hospital, an addiction treatment facility, long-term care facilities, home care and hospice services, retail pharmacies, outpatient services and a comprehensive medical management corporation.

Ballad's hospitals include:

- Bristol Regional Medical Center
- Dickenson Community Hospital
- Franklin Woods Community Hospital
- Hancock County Hospital
- Hawkins County Memorial Hospital
- Holston Valley Medical Center
- Indian Path Medical Center
- Johnson City Medical Center
- Johnson County Community Hospital
- Johnston Memorial Hospital
- Laughlin Memorial Hospital
- Lonesome Pine Hospital
- Mountain View Regional Medical Center
- Niswonger Children's Hospital
- Norton Community Hospital
- Russell County Medical Center
- Smyth County Community Hospital
- Sycamore Shoals Hospital
- Takoma Regional Hospital
- Unicoi County Memorial Hospital
- Woodridge Hospital

Ballad Health Mission:

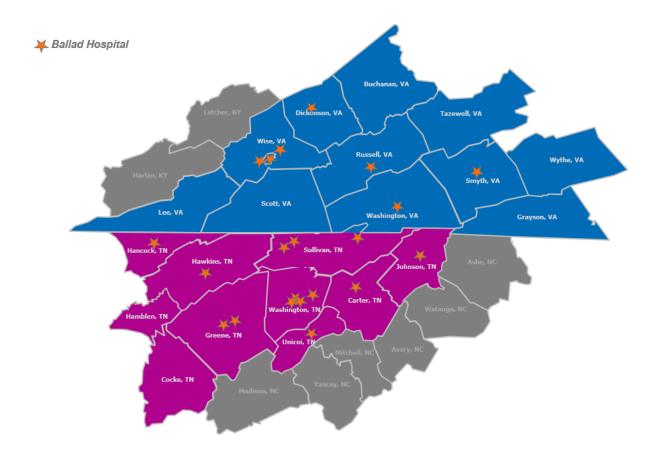

Ballad Health is committed to honoring those we serve by delivering the best possible care.

Ballad Health Vision:

To build a legacy of superior health by listening to and caring for those we serve.

The tagline of Ballad Health - "It's your story. We're listening." - is more than a marketing tool. Through the comprehensive state oversight and merger processes, the newly formed Ballad Health system was created to meet and address local health needs. Realizing that people want to receive care from someone who really listens to them, the organization's name and its tagline speak to the fact that good health is about more than healthcare — it's the story of people's lives. Located in the heart of Appalachia, Ballad pays homage to the traditions and stories that have shaped people's lives; yet, the organization also looks for new ways to partner with individuals and communities to make the region a healthier place to live and work.

With hospitals and services strategically placed throughout the region, Ballad Health is positioned to be the region's largest health care provider. The system's primary service area is comprised of 21 counties across Northeast Tennessee and Southwest Virginia, with a secondary service area encompassing an additional six counties in Western North Carolina and two counties in Southeastern Kentucky.

2 Executive Summary

Ballad Health is heavily invested in the health and well-being of its communities. In addition to its enhanced focus on population health management through the merger of the two legacy health systems, Ballad is also the largest employer in the region and the fourth largest employer in the State of Tennessee. Being such a prominent member of the regional economic community, Ballad has a strong desire to improve the health of the region, as well as its employees and their families. Realizing that health is tied to more than just genetics, Ballad is working towards a deeper understanding of the socioeconomic issues that face the population's ability to improve their overall health status. Social determinants of health related to topics such as access and ability to understand complex health conditions oftentimes go hand in hand with people's capacity to make optimal health decisions. Nevertheless, Ballad views the current health disparities of the Appalachian region as the opportunity to go beyond the walls of the hospital and work hand-in-hand with communities to make sustainable change happens for generations to come.

As part of the state oversight process, Ballad and its hospitals and entities have committed to improving the health status of its service area counties by agreeing to focus on an index of 25 active population health index measures (plus an additional 31 measures for monitoring). The population health index creates a platform for Ballad to further engage the efforts of its hospitals in partnership with the surrounding communities in order to drive change in a region that has a number of health disparities and access challenges. Leveraging the community health needs assessment process has helped Ballad to further educate on the health disparities that appear across the individual communities within its service area and has also helped the organization prioritize those issues that are most important in each hospital's community.

The population health index itself is based on the focus areas outlined in the previous community health needs assessments of both legacy systems (Mountain States and Wellmont), as well as the state health plans of both Tennessee and Virginia. Additionally, the Ballad population health index aligns with national health improvement efforts, such as Healthy People 2020. Although quite comprehensive, the index actually allows Ballad to be proactive with more-defined health improvement focus areas. Also, by encompassing the on-going work of local community and civic organizations, all vested groups can begin to work more so in unison, rather than in silos.

In order for Ballad to serve its region most effectively, it is essential to understand each community's individual needs. As such, Ballad conducted community health needs assessments to profile the health of the residents within its service areas. Activities associated with the development of this assessment have taken place from fall of 2017 through the spring of 2018. Primary data was obtained through individual surveys and focus groups with participants from the local communities, while secondary data was collated from national, state, regional, and county-specific sources.

Throughout this community health needs assessment process, high priority was given to determining the health disparities and available resources within each community. Community members from each county met with Ballad representatives to discuss current health priorities and identify potential solutions. The information gathered from a local perspective, paired with county, state, and national data, helps to communicate the region's health situation in order to begin formulating solutions for improvement.

According to America's Health Rankings, in 2018 Tennessee ranked 45th and Virginia ranked 19th out of 50 states for overall health outcomes. Both states had high rates of obesity, heart disease, addiction, and mental health concerns. Though Virginia's overall ranking is significantly higher than that of Tennessee's ranking, the health outcomes in Southwest Virginia counties, where Ballad facilities are located, resembles those of Tennessee. After compiling the various sources of information and using population health index as a starting point for discussion, the top health priorities were identified for the communities that each of the hospitals serve. This effort has led to the determination of the top health priorities for Smyth County to include **obesity, substance abuse, mental health, and child abuse**. There are certainly a number of other health challenges in this community, but these rise to the top based on the assessment.

For reference, a complete list of the Ballad population health index measures can be found in the accompanying table. A more comprehensive view, with actual county versus state-level data, can also be found in the Appendix section of this report.

Ballad Health Population Health Index: Measure List							
Smoking Rates							
Smoking Rates During Pregnancy							
Youth Tobacco Use Rates							
Physically Active Adults Rates							
Physically Active Youth Rates							
Adult Obesity Rates							
Obesity Levels in Public School Students							
Average mPINC Score (CDC Hospital-based survey on child/maternal health)							
Breastfeeding Initiation Rates							
Infants Breastfed at 6 months Rates							
Neonatal Abstinence Syndrome (NAS) Births per 1,000 live births							
Drug Deaths per 100,000							
Adults using Prescription Drugs for non-medical reasons							
Children – On-time Vaccination Rates							
Vaccination Rates – HPV Females							
Vaccination Rates – HPV Males							
Vaccination Rates – Flu Vaccine, Older Adults							
Teen Pregnancy Rates							
Third Grade Reading Levels							
Dental Sealants (ages 6-9; 13-15)							
Frequent Mental Distress Rates							
Infant Mortality Rates (per 1,000 live births)							
Low Birthweight Rates							
People with Pre-diabetes referred to a prevention program							
Premature Death Rates (per 100,000)							
Cancer Screenings (breast, cervical, colorectal)*							
Diabetes Screenings*							
Hypertension Screenings*							

^{*}The screening measures in the above table are not included in the official population health index, but are included as access measures to which Ballad will be held also accountable. Because of their relatability to the population health measures, they were also considered in the community focus group discussion.

3 Smyth County Community Hospital

i. Facility Description

Smyth County Community Hospital (SCCH), located in Marion, Virginia, has a total of 44 beds, including a four-bed ICU, a twenty-six bed Medical Surgical unit, and a fourteen bed Inpatient Rehabilitation unit. In addition, SCCH also operates a 109-bed, dual certified skilled nursing facility (Francis Marion Manor), Smyth County Home Care, and a variety of outreach programs. SCCH has served the region for over 45 years with over 50 physicians serving on its active medical staff.

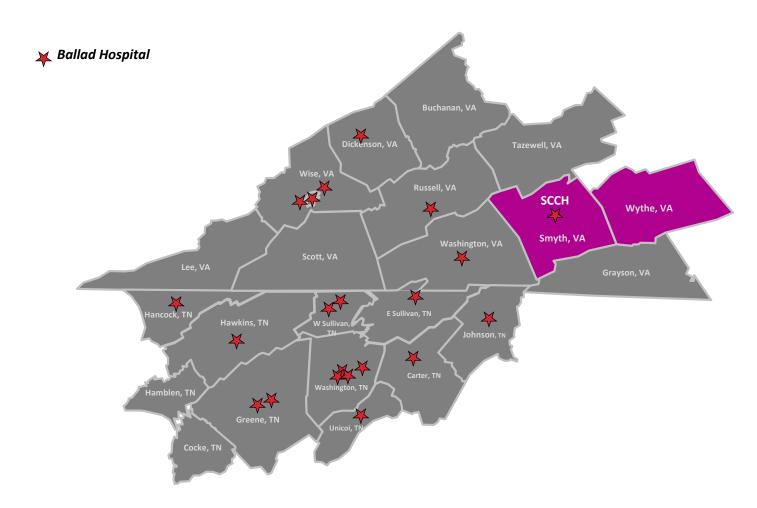

ii. Scope of Services

Smyth County Community Hospital offers a range of services including the following:

- Acute medical services
- Surgical services
- Rehabilitation services
- Emergency services
- Cardiopulmonary services
- Home health
- Skilled nursing and long-term care
- Diagnostic sleep center

iii. Primary Service Area

Smyth County Community Hospital serves the populations of Smyth and Wythe Virginia. The map below highlights these two counties.

4 Community Assessment Summary

i. Market Overview

Smyth County Community Hospital, located in Marion, Virginia, primarily serves Smyth and Wythe Counties in Southwest Virginia. Smyth County has a population of 31,470. The population projections for Smyth County over the next five years show that the county will likely experience little to no population growth overall. However, the age 65+ population for Smyth County is projected to experience the most population change over the next five years, as it moves from 21.8% of the total population in 2018 to 24.3% of the population in 2023. The aging population of the county presents opportunities for earlier identification and better management of health conditions that oftentimes affect elderly populations in rural areas.

Additionally, the median household income for Smyth County is \$38,900 which ranks well below the average for the state of Virginia at \$68,114. Other demographic factors influencing health status in the county also includes education levels. A large portion of Smyth County residents do not have an education past high school (56.8%). The remaining portion of the population reports having some college/associates degree (28.8%) or a bachelor's degree of greater (14.4%). Additionally, a large portion of Smyth County (17%) residents do not have health insurance, which is higher than the Virginia state average of 15%.

According to the 2018 County Health Rankings, Smyth County, where SCCH is located, is ranked 102nd in Virginia for health outcomes and 100th for health factors out of 133 counties/cities. Smyth County also ranked 106th in health behaviors. When compared to other Virginia counties, Smyth County has high rates of adult obesity and physical inactivity, as well as high rates of alcohol-impaired driving deaths. As for social and economic factors, Smyth County ranks 95th due to high rates of children in poverty and higher unemployment rates. A graphical representation of the 2018 County Health Rankings for Smyth County components can be found in the appendix.

ii. Methodology

a. Community Interview Summary

As part of the community health needs assessment process, Ballad Health conducted localized community focus groups with organization representatives such as those from local health departments, school systems, law enforcement, and philanthropic boards. The individuals in each community were selected for participation by the hospital's CEO. These members were selected due to their involvement in the health of the community and their direct relationship to the population served.

Focus Groups - Representatives:
Mount Rogers Community Services Board (CSB)
Mount Rogers Health District
Emory & Henry, School of Health Sciences
Smyth County Sheriff's Department
Marion Police Department
Smyth County School Board
Smyth County Circuit Court
Smyth County Department of Social Services
Members of the SCCH Health Trust Board
Members of the SCCH Community Hospital Board

b. Collecting Community Input

Along with an introduction to the relationship between socio-economic conditions and overall health status at a national and state level, focus group participants were shown Smyth County-specific health indicators as compared to the overall State of Virginia rates. As part of the commitment to population health under the merger, participants were made aware of the 25 measures that make up the Ballad population health index and the 3 additional measures related to access to screenings that complemented the community health discussion.

Members of the Ballad Health Strategic Planning Department then asked the community members to complete a 5-question survey relative to what health priorities should be a focus area for their specific community over the next three years, what existing resources were already at work in the community, how the hospital can best support identified priorities, what preexisting barriers are in place, and who else might be good to include in these community-level improvement discussions.

After the survey was completed, the group as a whole discussed their thoughts related to each question to further enhance the level at which the priorities were identified. The same information and process were later presented to the hospital's philanthropic foundation board members to further build awareness of the Ballad commitments made to population health and gain additional insight into community prioritization of specific health conditions/disparities.

	Survey Questions
1	Which of the health priorities mentioned can this community work to improve in the short term (3 years)?
2	What existing resources, such as organized groups or public health initiatives, have been developed and are in place to address these health priorities?
3	How could resources at this hospital best support your identified priorities?
4	What pre-existing barriers are in place that may prevent improvement on these identified priorities?
5	Who else from the community should be involved in these initiatives?

iii. Key Priorities Identified

After interviews with the various focus groups, the Smyth County representatives identified the following priorities as the top focus areas for their community health improvement efforts and subsequent implementation plans:

Priority Focus Area	Sub-Measure
Child Abuse	
Obesity	Adult Obesity
Mental Health	 Frequent Mental Distress
Substance Abuse	Drug Overdose DeathsNAS births

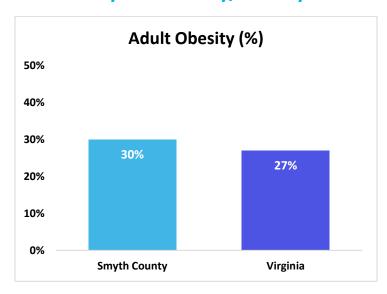

As evidenced by the county-level vs. state-level data represented for each of the priority measure selected by Smyth County focus group participants, opportunity for improvement exists to better the results across all priority measures within the local community. Although not all metrics compare unfavorably to the overall state data,

opportunity still exists as the Virginia data is not intended as a benchmark, but merely as a comparison.

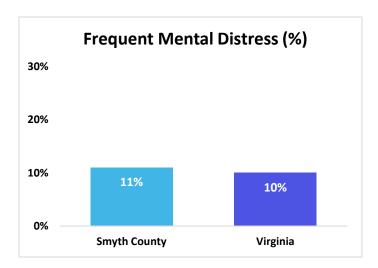

By identifying these priority areas, Smyth County Community Hospital in conjunction with Ballad Health and other local community organizations can begin to implement targeted programs and efforts to improve the overall health and well-being of citizens of Smyth County. Foundational to any population health improvement effort is the identification of actionable priorities and now that has been accomplished, the hospital can begin to formulate targeted implementation plans to help address the disparities plaguing parts of its population.

Priority Area Measures with County vs. State Comparisons (where available):

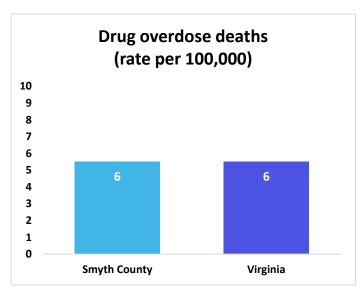

Physical Activity/Obesity

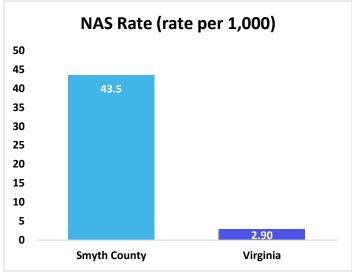

Mental Health

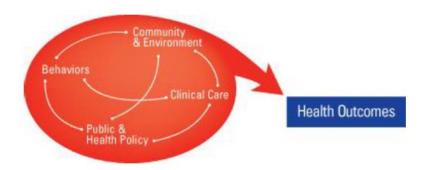

Substance Abuse

iv. Barriers and Gaps

Because health is more than just a result of behaviors or individual pre-disposition to disease, Ballad realizes that it must also evaluate social determinants such as the environment and community in which people live, the access to care they have, and the policy issues that exist/are absent in order to be able to make effective strides in improvement.

Behaviors include the everyday activities that affect personal health. They include habits and practices we develop as individuals and families that have an effect on personal health and utilization of health resources. Behaviors are modifiable with effort by the individual supported by community, policy, and clinical interventions.

However, equally important to health behaviors are community and environment factors, health policy, and access to clinical care. Community and environment reflects the reality and daily conditions in which people live. Health policies are indicative of the availability of resources to encourage and maintain health and the extent to which public health programs reach into the general population. Access to clinical care reflects the accessibility, quality, appropriateness, and cost of care received at doctors' offices, clinics, and hospitals. All four areas of health determinants are intertwined and must work together to be optimally effective in improving health status.

To help understand social determinants of health for the community, participants in the Smyth County Community Hospital focus groups also identified barriers and gaps that may impact progress in improving the key priority measures. The identified barriers and gaps for Smyth County include:

Obesity:

- Challenges getting enough food and healthy food
- Stigma associated with asking for help

- Smyth County food desert status
- Cost of healthy food
- Stigma of being overweight/obese
- Transportation to medical care appointments; fitness centers
- Lack of afterschool activities
- Lack of understanding on how to prepare healthy food
- Lack of outdoor walking trails

Mental Health

- Stigma of mental health disease
- Finances to be able to afford help
- Lack of day treatment services
- Lack of mental health providers and clinic employees willing to stay in the area
- Smyth County residents do not have direct access to the local state-run mental health hospital (SW VA Mental Health Institute)

Child Abuse

- High substance abuse rates precipitating high child abuse rates
- Generational cycles of abuse
- Lack of services/family support
- Transportation to counseling/support services
- Low compliance to court orders
- Homelessness (lack of access to stable housing environments)
- Lack of parenting skills classes
- Lack of in-school training for identifying child abuse
- Availability of child care

Substance Abuse

- Transportation to services
- Affordability of/distance to certain treatment programs
- Stigma of substance abuse issues
- Lack of second-chance employment opportunities
- Generational cycles of addiction
- Follow-through with commitment to recovery programs
- Funding for community programs
- Education on addiction and treatment options
- Treatment options for the whole family

v. Community and Hospital Resources

To help improve the identified health priorities for Smyth County, focus group participants were also asked to help identify current programs/organizations/ individuals from the local community that may be of assistance with the population health efforts in their county. Because multiple resources working together for the same cause can help to drive change faster, having the inventory of local resources with whom Ballad can partner with is key. There are many resources currently in existence in Smyth County through the both the hospital and local organizations. The resources identified in the focus groups are as follow:

- Mount Rogers Health District Wellness Team
- Wellness Center
- Emory & Henry School of Health Services
- Smyth Health Trust
- Community Services Board
- Life Center of Galax
- Community Coalitions
- Heatherwood Counseling
- Drug Recovery Court
- Smyth County Health Department
- Virginia Department of Health
- DARE Offices
- Head Start

In addition to preexisting resources in the community, the focus group participants also discussed possibilities for how the hospital can continue or enhance programs/ services to provide local resources to support the identified priorities. To enhance existing resources, the participants stressed the significance of increasing public awareness of both addressing one's health needs and the availability of health care options within each community. Additional suggestions as to how Ballad and Smyth County Community Hospital can improve the previously identified health priorities are listed below:

- Child Abuse Prevention Month awareness/activities
- Trauma Informed Community/Care (TIC)
- Parenting classes
- Education in schools on health priorities
- Family planning
- Neonatal Abstinence Syndrome (NAS) workgroup

- Intensive Outpatient treatment options through the Community Service Board
- Office Based Opioid Treatment (OBOT) expansion of services
- Women, Infants, and Children (WIC)

To further address health priorities within the community related to social determinants of health, programmatic opportunities were also discussed to assist with areas such as built environment (i.e. playgrounds, creation of safe sidewalks, bike sharing/bike paths, etc...), improved literacy rates and understanding of overall health, and healthy food availability (i.e. community gardens, farmers markets, etc...).

vi. Conclusion

As hospitals and health systems continue to work to make the communities they serve healthier, the identification of prioritized population health issues has become an area of strategic importance. Because Smyth County Community Hospital is located in a region with many chronic disease challenges, that prioritization becomes even more important so that focused actions can be developed and implemented with strategic purpose. The allocation of hospital resources to the prioritized issues, coupled with partnerships with other community organizations, will continue to build momentum toward the building of a healthier Smyth County.

iv. Ballad Health Population Health Index

Measure	Smyth County	Virginia	Better/ Worse than VA
Smoking	19%	17%	Worse
Smoking During Pregnancy (rate per 1,000 births)	171.5	56	Worse
Youth Tobacco Use	n/a	25.7%	
Physically Active Adults	73%	79%	Worse
Physically Active Youth	n/a	54.8%	
Adult Obesity	29%	27%	Worse
Obesity in Public School Students	n/a	n/a	
Average Maternity Practices in Infant Nutrition & Care (mPINC) Score	n/a	n/a	
Fully Breastfed	7.1%	10.2%	Worse
Partially Breastfed	2.4%	12.4%	Worse
NAS Births (rate per 1,000)	19	6.10	Worse
Drug Overdose Deaths	24	12	Worse
Adults using Prescription Drugs for non-medical reasons	n/a	n/a	
Children – On-time Vaccinations	n/a	64.4%	
Vaccines – HPV Females	n/a	32.7%	
Vaccines – HPV Males	n/a	33.3%	
Vaccines – Flu Vaccine, Older Adults	n/a	63.0%	
Teen Pregnancy	49	25	Worse
Third Grade Reading Level	82%	75%	Better
Dental Sealants	n/a		
Frequent Mental Distress	12%	10%	Worse
Infant Mortality	3.9	5.9	Better
Low Birthweight	8%	8%	On Par
People with Pre-diabetes referred to a prevention program	n/a	n/a	
Premature Deaths	510	310	Worse

Note: County level data currently not available for all index measures; Ballad is working with the Commonwealth of Virginia to develop baseline and collection/reporting methodologies moving forward

Fully and partially breastfed infant data is from the subset of women who are involved in WIC

v. Key Definitions for Population Health Index Data

Third grade reading level: Passage rate for third grade reading subject standards of learning (SOL) Kidscount

Frequent Mental Distress: Percentage of adults reporting 14 or more days of poor mental health per month, County Health Rankings, 2017

Obesity: Greater than 30.0 Body Mass Index (BMI), County Health Rankings, 2017

Adult Physical Activity: Percentage of adults over age 20 who participated in leisure time physical activity, County Health Rankings, 2017

Youth Physical Activity: Were Not Physically Active At Least 60 Minutes Per Day On 5 Or More Days, Youth Behavioral Risk Factor Surveillance System, 2016

Smoking: % of adults who are current smokers, County Health Rankings, 2017

Youth Tobacco Use: Ever tried cigarette smoking (even one or two puffs), 2015

Smoking During Pregnancy: Number of births for which the mother indicated she smoked while pregnant, Virginia Department of Health Maternal-Child Health, 2014

Low Birthweight: Percentage of live births with low birth weight (<2500 grams), County Health Rankings, 2017

Infant Mortality: Number of all infant deaths (within 1 year), per 1,000 live births, County Health Rankings, 2017

Prenatal Care Beginning in First Trimester: Local Agency Report VA Department of Health, 2015

Virginia WIC Participants who either partially breastfed or fully breastfed: WIC Breastfeeding Data, 2015

Teen Births: Births to mothers aged 15-19, County Health Rankings, 2017
